

Thank you for your interest in The Eye Institute and state-of-the-art cataract surgery.

The Eye Institute of Utah was established in 1980 and is known throughout the Intermountain West as a leader in the eye care industry, specializing in cataract, refractive and cosmetic eye surgery. Cataract surgery is proven to be a safe and effective method of restoring vision loss due to cataracts. It also provides an opportunity for reducing or eliminating glasses needed to correct nearsightedness, farsightedness, astigmatism and presbyopia.

Your next step is to schedule a cataract consultation with one of our experienced doctors. This extensive evaluation will determine if cataract surgery is the right procedure for you. We will also inform you about the premium intraocular lenses that may reduce or eliminate your dependence on glasses after cataract surgery. Please plan on spending approximately 2 hours with us for this important testing. Your eyes will be dilated and a complete ocular health evaluation will be conducted.

If you currently wear hard contact lenses (gas permeable), it is important to have them out for at least three (3) weeks. If you wear soft contact lenses, please refrain from wearing these for at least one (1) week

If you have not already done so, you may schedule your appointment time with one of our representatives at **801-266-2283** or **800-987-EYES**.

We accept most major insurances as well as credit cards, flex spending accounts and cafeteria plans. We also offer very affordable financing options with low monthly payments.

Should you have additional questions regarding our services, please call the above numbers to speak with a representative or visit our website at **www.theeyeinstitute.com**.
